BNM748 STRATEGIC GLOBAL OUTSOURCING AND OFFSHORING

Academic Year 2013/14

Number of Aston Credits: 15
Number of ECTS Credits: 7.5

Staff Members Responsible for the Module:

Professor Julia Kotlarsky, Operations & Information Management Group
Aston Business School Building Room 262 Ext: 3116
E-mail: j.kotlarsky@aston.ac.uk
Availability: email for appointment
Or contact the Operation & Information Group Administrator,
John Morley ABS 266, Ext 3236.

Pre-requisites for the Module:

No core modules required.

Mode of Attendance:

On campus

Module Objectives and Learning Outcomes:

The module will offer a broad perspective of various issues relating to the outsourcing and offshoring of strategic IT and business services in a global context. In this regard the key objectives of this module are (i) to assess the role that sourcing plays in shaping business and IT strategy in a global context, (ii) how to make sourcing decisions and engage in outsourcing/offshoring initiatives, and (iii) how to manage outsourcing and offshoring to achieve superior performance. The module will examine in depth both sides of the equation: client and service provider perspectives, and will discuss the role of intermediaries.

From a client viewpoint we will discuss various decisions and strategies relating to outsourcing and offshoring, among them which activities and systems to outsource and which to retain in house? which country to select? how to select a service provider? what capabilities to develop in house to successfully manage the outsourcing relationship?
From a service provider viewpoint, we will examine strategies to leverage knowledge from individual relationships (projects) and develop them into organisational capabilities necessary to innovate and move up the value chain. Furthermore, we will focus on the core capabilities that suppliers need to develop and how clients can be made aware of “good” suppliers.

We will review and challenge best practices and methodologies in outsourcing of IT and business services using examples from most recent research. Furthermore, we will discuss changes and future trends in the outsourcing marketplace reflecting on (i) recent events and economic trends in wealthy, emerging and developing nations and (ii) threats and benefits for clients and vendors. For example, we will discuss most recent trends such as (i) backourcing (that is bringing back in-house services previously outsourced to a third party), (ii) how to achieve innovation in outsourcing, and (iii) emerging sourcing models such as crowdsourcing and cloud services.

Students will be able to apply many theoretical concepts in practice and develop hands-on experience in outsourcing through engaging in real-life outsourcing project that will be their group assignment for this module.

At the end of the module students should be able to make strategic decisions related to outsourcing and offshoring and effectively steer third parties.

**Learning Outcomes:**

Upon successful completion of the module students will be able to:

(a) Knowledge and Understanding

> Understand how global sourcing affect business and IT strategy in a global context
> Achieve an awareness of the strategic, economic, political and social issues that global sourcing of strategic IT and business services surfaces from client and supplier perspectives.
> Understand key capabilities required by clients and suppliers to achieve successful outsourcing relationships

(b) Cognitive and Analytical skills

> Critically analyse and compare the suitability of different types and strategies that can be adopted by clients and suppliers.

(c) Key/Transferable Skills

> Oral and written communication and team working skills
> Presentation skills
> Report writing skills
(d) Subject Specific / Professional Skills

- Identify what areas of the business a client should outsource/offshore (and what not to).
- Understand the transition and planning issues in IT and Business Process Outsourcing and Offshoring.
- Apply key frameworks and methodologies in practice, i.e. decision-making and implementation of outsourcing arrangements in real-life situations.

Module Content:

1. Overview of the global sourcing marketplace
2. Sourcing models: what and when to outsource/offshore
3. Country attractiveness for sourcing
4. Client perspective: supplier configuration, vendor selection strategy, and retained management capabilities
5. Supplier perspective: core capabilities and strategies
6. Leveraging knowledge and expertise in global teams
7. The outsourcing lifecycle and the transition phase
8. Governance of outsourcing projects
9. Emerging topics: e.g., innovation in outsourcing

Corporate Connections:

Each session will incorporate the use of case study examples in the form of full length or mini-cases as well as various multi-media resources. Visiting speakers representing client, vendor or intermediary organizations will contribute to two sessions (about 1.5 hours per guest lecture, planned 2 guest lectures). One of the most important aspects of this module that will enable students to gain practical experience will be a real life outsourcing project that students will undertake in groups (about 4 people in the group). They will be outsourcing a specific task using electronic marketplace such as Freelancer.com (for example). This exercise will enable them to gain hands-on experience on a wide range of topics covered in the class and apply theoretical frameworks in practice.

International Dimensions:

The context of this module and therefore the content is truly international. The “global” aspects of outsourcing and offshoring will be addressed constantly and from various angles

Contribution of Research:
The member of staff teaching the module is an international expert in outsourcing and offshoring. The NIE (Professor Julia Kotlarsky) who will be delivering this module has extensive experience in the area of global sourcing. She has acted as consultants to IT vendors and government and widely published her work on global sourcing in articles and books, including the *Wall Street Journal* article on offshoring strategies. Julia is also the co-founder of the Global Sourcing Workshop (www.globalsourcing.org.uk/workshop).

**Ethics, Responsibility & Sustainability:**

The module will discuss issues related to ethics and responsibility in the context of global sourcing.

**Method of Teaching:**

Lectures, case study analysis and discussion, group work (real life outsourcing project), directed reading.

**Method of Assessment and Feedback:**

Group work 30% and individual assignment (case study analysis) 70%.

Group work includes group assignment, which is based on the real life outsourcing project that the students will undertake (25%) and discussion of case studies and other group exercises (5%)

Feedback on the presentations (group assignment) will be given by e-mail before the individual assignment is given out. A summary of the students’ performance overall will be posted on Blackboard after the marks have been approved by the Board of Examiners.

**Learning Hours:**
